

What's *The Climate Collage*?

« The Climate Collage » is a fun, participatory and creative workshop on climate change. Based on collective intelligence, it is an extremely educational tool: it gives the opportunity to learn a lot in a very short period.

How to play?

The game rules are very easy to understand: the purpose is to find the causal links between the different components of climate change, each card being associated with one of them.

Who wants to play?

The Climate Collage is a game that is addressed to both novices and knowledgeable. Its practice is perfectly adapted to team building sessions or business seminar, adult or child education or large-scale awareness actions.

What's the goal?

The objective is to increase awareness to climate change stakes among as many people as possible thanks to this game. We would like this game to be used by many other facilitators to widely spread the word.

Climate change

The game explains how the climate works and the consequences of its disruption. This workshop sheds light on the complexity of climate change, gives us keys to understanding and provides an overview of the climate system.

It provides an introduction in three hours to the scientific findings and impacts of climate change, as described in the latest IPCC report.

Différentes versions

The game already exists in English and Chinese and is being translated into German, Spanish and Arabic.

A junior version is also available.

Become a facilitator

Animators can facilitate the game for free in cases of non-commercial setting. In a commercial context, the game is subject to a user license.
